

Vibe Code: First Build Day

Friday Agile Sprint Planning Template

Plan what you are building, define user stories, track your backlog, and close with an end-of-day retro.

Friday Sprint Planning

Fill this out at the start of every Friday before you start building. Same template every week — whether it's a Vibe Code Friday (exploring and experimenting) or a Project Friday (building your actual project). By Week 13 this is muscle memory.

1. What I'm Building Today

(One sentence. If you can't say it in one sentence, scope it down.)

Project: Tip Calculator

Today's goal: Ensure that AI Gemini works accurately.

2. User Stories

Write 3-5 user stories for what you're building today. Format: "As a [who], I want to [what] so that [why]."

#	User Story	Priority
1	As a _anyone_, I want to _split receipt_ so that _groups don't have to tell the waitress (It's cumbersome for the waitress to split the receipt individually_	Make sure AI understands the my concept.
2	As a _anyone_, I want to _use phones_ so that _anyone can use their phone_	Test the phone. I am not using Bootstrap for example. So I need to know if my iPhone is capable of adapting to app with GitHub
3	As a __anyone_, I want to _androids and iPhones to work_ so that __either can use it_	Nice to have both android and iPhone to work.
4	As a _anyone_, I want to __to be able to see the app without zooming out 50%_ so that ___	Nice to Have

5	As a ____, I want to ____ so that _the settings do not have to be changed__	100vh and 100vw on phone.
---	---	---------------------------

3. Backlog

Break your user stories into specific tasks. Be concrete — "make it look good" is not a task. "Add flexbox layout to the card grid" is.

Task	From Story #	Priority	Estimate	Status
Bottom-nav Display: flex; space-around	Easy to accomplish with prompts	Must Do	S	Completed
flex-direction: column;	Easy to accomplish with prompt and verification	Must Do	S	Completed
Responsive typography	Must have clamp: h1 { font-size: clamp(2rem, 5vw, 3.5rem); }	Scale nicely on phones	S	Completed
Mobile viewport .app-container	max-width: 1200px; change to 100%	Nice to Have	S	Completed and it worked. I tested it on my iPhone. I was surprisingly satisfied.
Drag and drop ⚠ Not reliable on iOS Safari	Must Use: • touchstart • touchmove • touchend For native drag events	Nice to Have	L	Started ✓ bottom padding ✓ safe-area support ✓ better sizing About 75% mobile ready
		Stretch	S / M / L	Not Started

Estimates: S = under 30 min, M = 30–60 min, L = over 1 hour

Rule: If your Must Do tasks total more than ~3 hours of estimated work, you have too many Must Dos. Move something to Nice to Have.

4. Definition of Done

How do you know you're finished? Be specific.

- [I know I am finished when the task works the way I planned it to work]
 - [I know I am finished when it passes a test.]

- [I know I am finished after I have refined it and made changes to improve it to the best of my ability.]
- Code committed and pushed to GitHub: Even after I push it to GitHub, I run into issues, and I know that I am not finished when new problems surface.

-

5. End of Day Retro

Fill this out at the fireside chat.

What I shipped today: <https://jdbostonbu-ops.github.io/Tip-Calculator/>

What I learned: I learned that not fully understanding the back end prevents me from moving forward successfully.

What blocked me: Not understanding how to make the back end work properly.

What I'd do differently next Friday:

My sprint score: __1__/10

(Did I finish what I planned? 10 = shipped everything. 1 = nothing went to plan.)
